Professional Summary

Quality Engineering and Software Development leader with 6+ years of total experience designing test automation suites, leading test-driven development efforts, and governing application quality across healthcare, automotive, education, and SaaS environments. Experienced in automated UI frameworks, APIs, integration, regression, and application health testing, as well as CI/CD integration, release validation, production-quality governance, bug identification and resolution and cross-functional technical leadership.

Background includes leading onsite and offshore resources, creating reusable automation frameworks, improving Agile and defect-management processes, and delivering reliable solutions across modern, legacy, distributed, CMS-integrated, and mainframe-connected platforms. Hands-on experience with multiple technologies and migrations including Java, Selenium, REST Assured, Postman, SQL, JavaScript, Node.js, Jest, React, Spring Boot, GitHub Actions, Jira, Azure DevOps, and ServiceNow.

Core Skills & Competencies

Languages/Frameworks: Java (5/8/11/17/21), Spring, JSP, C#/.NET Core, Python, Node.js, Express.js, React, Vue, Ember, Flask, HTML5, CSS3, Typescript, JavaScript

Data/Cloud/Build: SQL Server, DB2-SQL, Oracle SQL, PostgreSQL, WebSphere, OpenShift, Kafka, Apigee, AWS, GCP, Azure, SVN, Git, GitHub, GitHub Actions, GitLab, SVN, ServiceNow

QA/Automation: Selenium, Jest, Nightwatch, Mocha, Chai, Cucumber, Postman, Insomnia, TDD, CI/CD (YAML pipelines)

PM & Process: Agile, Scrum, Kanban, Jira, ADO, SmartSheet, Monday, Trello, Confluence, SWOT Analysis, Google Analytics 3 & 4.

Professional Experience

Full Stack Software Developer

Pagewheel | March 2023 – Present (Contract)

- Develop AI-powered bot functionality and integrate it into the broader software platform.
- Build and maintain full-stack functionality supporting platform workflows and user-facing capabilities.
- Coordinate frontend, backend, API, and database changes required for platform integrations.
- Develop and validate application functionality across multiple system layers.
- Perform QA testing to identify defects, trace root causes, and implement fixes to stabilize system performance.
- Troubleshoot defects and production issues affecting application reliability, usability, and performance.
- Work with stakeholders to define requirements, identify risks, and scope technical solutions.
- Support quality improvements through structured testing, technical review, and issue resolution.
- Implement tests into development workflow using Playwright and Jest.

Full Stack Software Developer

Mitsubishi Motors North America (MMNA) | January 2023 – November 2025

Technologies: Java, Spring Boot, JSP, C#/.NET, SQL Server, IBM DB2, GitLab, SVN, Jira, ServiceNow, WebSphere, Rational Application Developer

- Led software development and quality-engineering efforts supporting enterprise automotive applications and mainframe modernization.
- Created and maintained automated testing suites for APIs, application workflows, data integrations, and legacy system functionality.

- Led test-driven development efforts by defining expected application behavior and incorporating validation throughout the development lifecycle.
- Implemented resource-, process-, and tool-based automation to continuously validate application health and identify failures across dependent systems.
- Developed headless and API-driven tests to verify service availability, response integrity, data consistency, and critical business processes.
- Designed automated validation for Java APIs created during the migration of COBOL mainframe functionality into modern services.
- Reverse-engineered COBOL mainframe applications and rebuilt core business processes as Java REST APIs, enabling phased platform migration.
- Established automated validation and release practices supporting a zero-downtime mainframe cutover.
- Coordinated application, database, API, deployment, testing, and stakeholder requirements across modernization initiatives.
- Re-architected the Client Relations system, improving data integrity and reducing duplication across application workflows.
- Redesigned backend and frontend infrastructure for NHTSA reporting, reducing report-generation time by approximately 60%.
- Built reusable deployment and packaging automation for WebSphere and Rational Application Developer environments.
- Standardized build, validation, and release practices that were later adopted across the enterprise.
- Developed dynamic application functionality within legacy HTML4 and server-side Java constraints without introducing unsupported dependencies.
- Generated SQL extracts to identify defects, investigate production issues, validate data, and support project re-scoping.
- Scoped technical requirements, automation coverage, testing considerations, estimates, timelines, and dependencies for application and database changes.
- Partnered with business, development, infrastructure, and leadership stakeholders to define acceptance criteria and delivery expectations.
- Identified user-interface defects and workflow issues and implemented improvements that simplified application usage.
- Planned and distributed development and validation work according to team priorities, delivery timelines, risk, and available capacity.
- Created Agile and Kanban processes for features, production defects, technical debt, testing, and competing project priorities.
- Developed standardized Jira templates for bugs, stories, defects, and subtasks, improving requirements, acceptance criteria, and testing consistency.
- Coordinated ServiceNow change requests for releases, database patches, environment refreshes, and production deployments.

- Created technical and visual documentation for stakeholders, developers, testers, and operational teams.

Selected Results

Delivered a zero-downtime mainframe cutover supported by automated validation.
 Reduced enterprise report-generation time by approximately 60%.
 Standardized deployment and quality practices adopted across the organization.
 Improved defect visibility, release consistency, data quality, application health, and maintainability.

Software Development Instructor

Nucamp, Inc. | November 2021 – November 2023

Technologies: Node.js, Python, Flask, PostgreSQL, HTML, CSS, JavaScript, REST APIs

- Delivered multiple full-stack software-development cohorts covering application development, API design, database integration, testing, and deployment.
- Taught students to create automated tests and apply test-driven development principles to frontend, backend, API, and database functionality.
- Mentored students on software architecture, debugging, code quality, maintainability, and testing best practices.
- Reviewed application projects and provided structured feedback regarding functionality, reliability, test coverage, and technical quality.
- Guided students through frontend, backend, API, database, testing, and deployment troubleshooting.
- Adapted technical instruction for students with different experience levels and learning requirements.

Application Developer I / II – Full Stack

HCA Healthcare, Information Technology Group | July 2021 – December 2022

Technologies: Java, Spring Boot, React, Vue.js, Ember.js, Node.js, C#, Selenium, REST Assured, Postman, SQL Server, IBM DB2, Sitecore, Formstack, Azure, Azure DevOps, Git, Jira, Confluence, ServiceNow

- Led application development and quality-engineering efforts across UI, API, service, database, CMS, security, analytics, and DevOps workstreams.
- Created and maintained software testing automation suites supporting enterprise patient-facing applications and integrations.
- Led test-driven development efforts by incorporating automated validation, acceptance criteria, and expected behavior into implementation planning.
- Developed automated tests for electronic-form workflows involving patient health insurance cards and related healthcare data.
- Created automation validating Sitecore CMS integrations with Formstack, ensuring form content, configuration, and downstream workflows remained consistent.
- Built API automation to verify that application page structures, components, and response contracts remained consistent across releases.
- Automated validation across frontend, service, API, database, and third-party integration layers.
- Coordinated delivery and quality activities across multiple teams supporting enterprise patient applications.
- Led offshore resources during an organizational transition and provided after-hours training on application functionality, development practices, and testing processes.
- Onboarded and mentored new team members on development standards, application architecture, source control, debugging, automated testing, and delivery workflows.
- Assigned development and testing work based on individual skills, technical experience, delivery risk, and team capacity.
- Evaluated requirements and produced technical estimates for development, automation, sprint planning, testing, and delivery.
- Collaborated with product, security, development, testing, and leadership stakeholders to define technical requirements and acceptable implementation approaches.
- Conducted a proof of concept for migrating Ember.js and Vue.js applications into a standardized React architecture.
- Developed and tested enterprise functionality across React, Vue.js, Ember.js, Node.js, Java, Spring Boot, C#, CSS, and SQL.
- Created API and server-side functionality to terminate closed or invalid user sessions.
- Expanded API capabilities and service integrations supporting the Patient Portal.
- Wrote IBM DB2 triggers and queries supporting user, facility, and application data.
- Investigated and resolved production defects across UI, API, service, database, security, browser, CMS, forms, and analytics layers.
- Resolved DevOps issues involving automated test execution, compilation failures, build processes, environment configuration, and local development.
- Addressed security inconsistencies between frontend and service-layer functionality.

- Created standards for source-control commits, ticket documentation, acceptance criteria, test coverage, and technical traceability.
- Developed Jira templates used by development, QA, and product teams to document requirements, dependencies, risks, and testing needs.
- Supported requirements, testing strategy, and ticket development for a major enterprise login-system rewrite.
- Presented technical practices, project risks, testing responsibilities, and development processes to nontechnical managers.
- Produced SWOT analyses for security and analytics initiatives.

Associate QA Test Analyst

HCA Healthcare, Information Technology Group | March 2020 – July 2021

Technologies: Java, C#, Selenium WebDriver, REST Assured, Node.js, Jest, Axios, Postman, SQL, GitHub Actions

- Designed, developed, and maintained automated functional and regression testing suites for enterprise healthcare applications.
- Built reusable UI automation frameworks using Selenium WebDriver.
- Created API test automation using JUnit, NUnit, Selenium, REST Assured, Node.js, Jest, Mocha, Nightwatch, Axios, and Postman.
- Developed reusable automation components supporting UI, API, integration, end-to-end, and regression testing.
- Integrated automated test execution into GitHub Actions CI/CD pipelines using YAML workflows and created automated reporting structures.
- Applied test-driven and automation-first practices while collaborating with developers on new and existing functionality.
- Validated application behavior across user-interface, API, service, integration, and database layers.
- Executed SQL queries to verify application transactions, backend data, and expected test results.
- Investigated defects, documented reproducible conditions, and partnered with developers to validate resolutions.
- Supported release testing, regression execution, production-readiness validation, and post-deployment verification.
- Trained business analysts to produce Agile-ready tickets with clear reproduction steps, requirements, and acceptance criteria.
- Improved development and QA intake by standardizing defect documentation and test-related ticket information.

Highlighted Projects & Achievements

- *MMNA: COBOL to Java APIs/ETL's Migration* – QA'd and reverse-engineered COBOL logic; delivered phased REST APIs powered via ETL logic in Spring Batch, Talend, and Informatica.
- *MMNA: NHSA Report Rewrite* – Refactored BED/FED infrastructure, reducing overall code complexity and future-proofing the application.
- *MMNA: Client Relations Redesign* – Improved workflows and normalized datasets for business operations.
- *MMNA: Legacy CI/CD Packaging Tool* – Adapted legacy code to automate build and deployment cycles for WebSphere.
- *MMNA: Dynamic Search Display* – Replaced manual search forms with dynamic, indexed rendering using native Java/HTML4.
- *HCA: Mobile Barcode Scanner* – Developed an iOS-based barcode scanning solution; saved ~\$19M in hardware replacement.
- *HCA: Session Termination Audit* – Closed 15-minute security vulnerability window via server endpoint along with FED checks to that new endpoint.
- *HCA: MyHealthOne Build Recovery* – Repaired 40+ corrupted DevOps repositories for both Maven and Node versioning issues.
- *HCA: Quick Ticket* – Built QR-based ServiceNow integration for nurse reporting workflows.

Technical Skills

Programming: Java, JavaScript, TypeScript, Python, C#, SQL

Test Automation: Selenium WebDriver, REST Assured, Postman, Jest, Axios, Headless Testing, API Testing, UI Testing, Integration Testing, End-to-End Testing, Regression Testing, Test Data Management, Mocking and Stubbing

Quality Practices: Test Automation Frameworks, Test-Driven Development, Behavior-Driven Development, Application Health Validation, Acceptance Criteria, Release Validation, Defect Management, Risk-Based Testing, Continuous Testing

Frameworks and Platforms: Spring Boot, React, Vue.js, Ember.js, Node.js, Flask, JSP, Sitecore, Formstack

CI/CD and DevOps: GitHub Actions, GitLab, Azure DevOps, WebSphere, Rational Application Developer, ServiceNow, CI/CD Pipeline Integration, Automated Test Execution, Build and Release Automation

Data: SQL Server, IBM DB2, PostgreSQL, Data Validation, Query Optimization

Management Tools: Jira, Confluence, Azure DevOps, ServiceNow

Architectures: Enterprise Web Applications, REST APIs, Microservices, Mainframe-Integrated Systems, CMS Integrations, Legacy Applications, Distributed Systems, Event-Driven Architectures

Education

- MBA, Master of Business Administration – Western Governors University, 2024
- MS, Information Technology Management – Western Governors University, 2020
- BS, Business Information Technology Management – Western Governors University, 2019
- Professional Certificate, Full-Stack Web Development Boot Camp (MERN) – Vanderbilt University, 2021

Certifications & Volunteer Work

- CompTIA Project+ (Credential ID: COMP001021355994)
- Former Vice Chairman, Stormwater Appeals & Advisory Board / Former Voting Member of Construction Board of Appeals– City of La Vergne, TN
- Office Hours Advisor, Hack for the Community (HCA Foundation, 2020)

Abbreviated Recommendations (From LinkedIn)

“Joseph is a very hard-working person who can manage any Java Based Full Stack Project with ease. We have worked together on several projects, and I found him a highly skilled and dedicated professional. His expertise in the field of Data Reengineering , Data Transformation and Loading has helped our company immensely. He led the Mainframe Migration project successfully that helped company several thousands of dollars , He’s also an all-around great guy to work with! I highly recommend him to anyone looking for help on their team.” - **Devendranth Thota (Manager, MMNA)**

“I had the pleasure of working with Joseph for a few months at Mitsubishi Motors North America (MMNA), and I found him to be an outstanding colleague. From day one, he helped create a positive team environment with his great sense of humor and kindness, even welcoming me warmly when I first joined the team, which I truly appreciated.

Professionally, Joseph is a naturally curious and analytical person who’s always eager to learn, explore, and find better ways to get things done. He consistently seeks improvement and brings valuable insights to every discussion. Any organization would be lucky to have him, he’s a strong professional and an even better teammate.” - **Freddy Sequira (Colleague, MMNA)**

“Most efficient is the phrase that comes to my mind when I think about Joseph. He is diligent, a fast learner, and adaptable. He taught himself web service test automation which added much-needed testing efficiency to the project. He is always looking for smart ways to solve a problem.

“We worked well together and as a part of the larger team. When we ran into issues that required research, he was right there with the rest of the team. He put in extra hours without any complaint. Joseph is very personable and enthusiastic about technology. He will be a true asset to any team and I wish him all the best.” - **Anupama Juneja (Team Lead, HCA)**

“Joseph is, in one word, tenacious!

He spares no effort digging into problems and figuring out solutions. He's not afraid to jump into the unknown. These are true qualities of a dedicated team member.

He takes his role very seriously and continues to learn and grow. ”

- **Mohamed Ibrahim (Manager, HCA)**
